

Initial Interface Requirements

revised requirements

1. Users should be able to limit searches by repository
2. Users should be able to do fielded searching

**The guidelines group will need to decide which fields should be indexed.

3. There will be a "keywords" field. This field would contain keywords indicated by archivist and would enable more efficient searching from the system's point of view...rather than search the entire finding aid we could do a quick search on keywords.
4. Search terms will be highlighted.
5. The Table of Contents will always be visible from a frame on the left side of the window.
6. We will display the finding aid in HTML
7. There will be a link to the XML version of each finding aid
8. There will be a "printer safe" version of the finding aid that will drop the frames when printing.
9. The finding aids will be available to Web robots for indexing.

**Possible feature: There could be a "keywords in context" feature that would show a results list contain key words as they appear in the document. The results would be a list of phrases/sentences with keywords highlighted.
